BANSHEE

01

BANSHEE

PRECISION CUT. VISIBLY BOLD.

Banshee is a product line forged from sheet steel and deliberate simplicity. Each element in this collection—from bench to bollard—is a clean gesture in form and function. Crafted through CNC bending and laser cutting, Banshee reflects the capability of steel to express strength with minimal volume. No unnecessary detail. No excess. Just metal, bent to serve, built to last.

Key Features

Unified Material Logic:

All products are fabricated from steel sheet and profiles, folded and joined with high consistency. This strategy not only ensures strength but also reduces production time and cost.

Bold Geometries:

Every line and curve in the Banshee collection is sharp, intentional, and scale-consistent. The design language stays controlled across typologies, allowing benches, bins, racks, and bollards to coexist seamlessly.

Monolithic Silhouette:

Elements are perceived as solid volumes, even when they are partially hollow. The result is a visual weight that

anchors each product confidently in urban space.

Integrated Function:

The bike rack is a continuous folded steel form that holds the wheel firmly without unnecessary accessories. The bin features a hidden opening for waste management that protects inner contents while maintaining its graphic edge.

Laser-Cut Details:

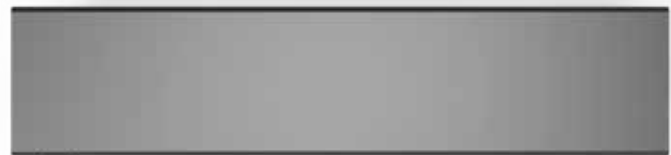

Perforations and ornamentation—when present—are executed with laser precision, offering decorative texture without compromising structure or identity.

BANSHEE BENCH

**BOLD GEOMETRY,
BUILT TO ENDURE.**

The Banshee Bench brings sculptural strength to public seating. Cut from heavy-gauge steel and cold-formed with clean, angular transitions, it balances structural clarity with visual presence. Its monolithic form rests on two continuous boxed supports, offering a grounded aesthetic and rigid stability. Whether backless or with a folded steel backrest, the bench offers a solid and lasting solution for high-traffic urban settings.

BANSHEE BENCH

**BOLD GEOMETRY,
BUILT TO ENDURE.**

Key Features

One-Piece Welded Body

Made from a continuous bent steel sheet, the bench body eliminates seams and joints for higher durability and a cleaner silhouette.

Reinforced Box Support:

The structural legs are fully integrated into the folded body, doubling as anchoring points and visual base. This detail ensures unmatched rigidity and resistance to vandalism.

Optional Backrest Version:

The bench can be configured in a backless format or with an extended vertical fold to support a backrest — both derived from the same manufacturing process.

Weather-Resistant Finishing:

Every bench is protected with a high-performance powder coating system, ensuring long-term resistance to corrosion and abrasion in outdoor environments.

Precision Laser-Cut Edges:

All contact edges and folds are cut with CNC precision, minimizing sharp edges and optimizing safety without losing material sharpness.

BANSHEE BIN

BUILT TO LAST, DESIGNED TO STAND OUT

The Banshee Bin completes the product line with a striking, monolithic silhouette and a carefully crafted laser-cut panel. Designed for high-traffic urban environments, this piece is fabricated in cold-rolled steel and finished with matte electrostatic powder coating. Its clean structure and perforated stainless front add ventilation, texture, and visual interest to an otherwise seamless form.

Key Features

Laser-Cut Front Panel:

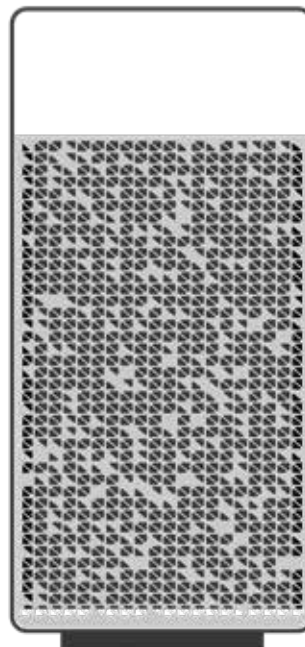

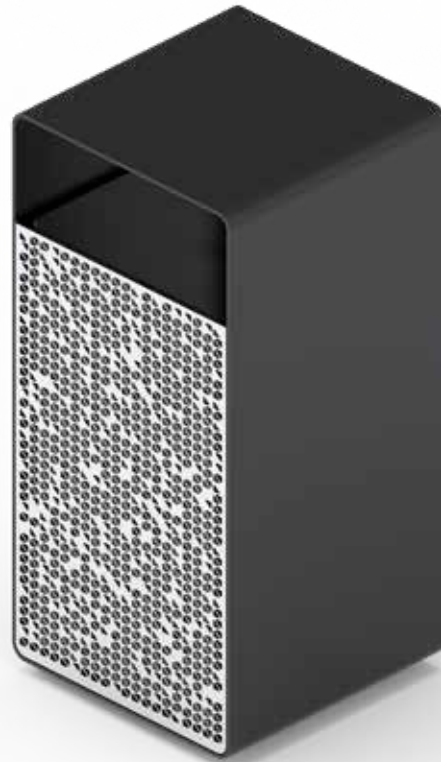

A standout detail, the stainless steel perforated faceplate balances functionality and identity. It allows airflow to reduce odor while reinforcing the signature Banshee pattern.

Steel Frame Construction:

The bin is formed from a continuous steel shell with no exposed edges, ensuring durability, anti-vandalism resistance, and ease of maintenance.

Top Access with Internal Ring:

The top-opening system includes an internal bag ring for clean liner changes, reducing visible clutter and user contact with waste.

BANSHEE BIKE RACK

SECURITY WITH PRESENCE

The Banshee Bike Rack is a sculptural anchoring element designed to secure bicycles with clarity and strength. Fabricated from precision-folded steel, its monolithic silhouette and subtle tapering geometry offer both impact resistance and urban elegance. Part of the Banshee product line, it pairs robust performance with expressive minimalism.

Key Features

Dual-Sided Access:

The wrap-around geometry allows bikes to be locked on either side, accommodating various orientations and frame sizes efficiently.

Integrated Base Plate:

The continuous steel bend extends into a floor-mounted plate, simplifying installation and improving structural grip on pavement or stone.

Secure Fit:

The angled inner walls provide natural wheel centering while offering multiple locking points for U-locks or cables.

Low Maintenance:

Built in durable powder-coated steel, it resists corrosion and withstands outdoor conditions with minimal upkeep.

BANSHEE BIKE RACK

05

BANSHEE BOLLARD

SLIM DESIGN, STRONG PRESENCE

The Banshee Bollard combines structural clarity with a refined lighting element. Designed from a continuous steel profile, its body bends gracefully to create a monolithic silhouette with an angled cut that frames the integrated light. This piece defines boundaries while adding a minimal, contemporary identity to public and private spaces.

Key Features

Monolithic Profile:

Formed from a single steel body with clean bends and soft-radius edges, the Banshee Bollard offers a robust stance with architectural presence.

Angled Light Recess:

The precision-cut slot houses a recessed LED source, casting a clean downward light ideal for pedestrian pathways without visual clutter.

Durable Powder-Coated Finish:

Protected with a matte or satin powder coating over galvanized or stainless steel, ensuring longevity against weather and urban wear.

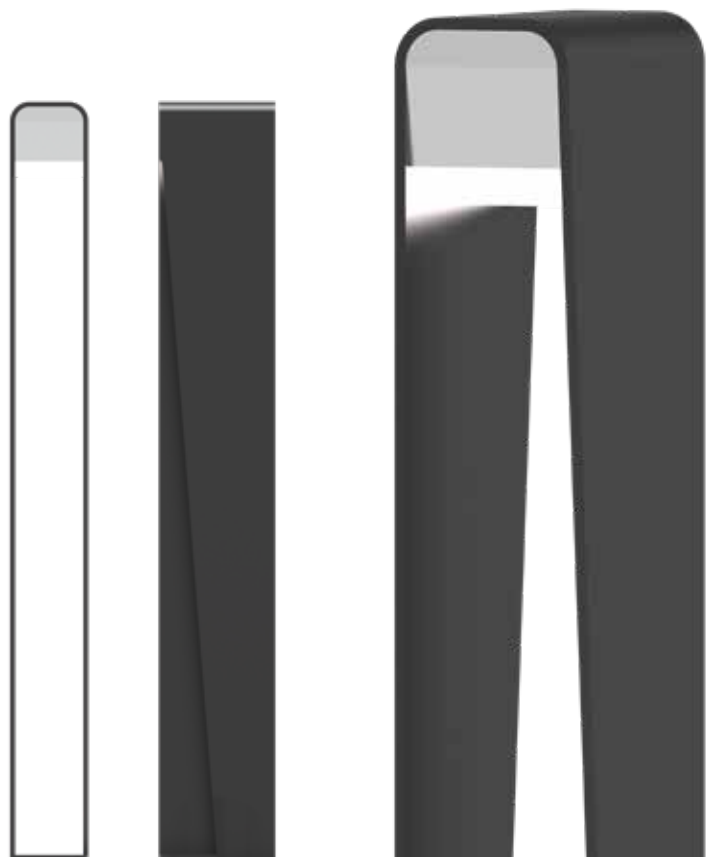

Discrete Mounting Base:

Anchored securely with hidden hardware, the base is integrated into the overall geometry, keeping the design clean and tamper-resistant.
